

Revised pages for the DANISH Product Standard

The changes are highlighted in yellow.

Amended June 2017

Front page:

January 2016 has been amended to June 2017

The name of the organisation has been changed to SEGES Svineproduktion

All references to DANISH on the website have been amended to dps.svineproduktion.dk

Page 4

2.1 Raw ingredients, ready-mixed feed, supplementary feed and additives must be purchased from Danish authorised feed companies and companies that appear on the approved list at SEGES' website. The list of approved companies can be viewed at dps.svineproduktion.dk

Page 5

3.8 New Regulation no. 423 of 17/05/2016

Page 6

3.14 All producers must have a self-audit programme for welfare in their herd (see Appendix 1).

3.16 All producers must have a self-audit programme for welfare in their herd (see Appendix 1).

Page 8, 5.7 has been amended to:

5.7 Sows must be loose-housed from weaning and until they are moved to a farrowing pen. This applies to new housing constructed after 1 January 2015 and for all housing from 1 January 2035. During oestrus, dry sows may be housed in individual pens for no more than three days.

5.12 In pens for piglets above 20 kg, for breeding stock and finishers, a sprinkling or misting system must be installed to allow the pigs to regulate their body temperature.

Page 10

8.4 Clarification of exception to 28 day weaning:

Piglets may, however, be weaned at 21 days of age if they are moved into special housing units that are cleaned and disinfected in between batches ('all in – all out')

8.8 Amended to:

For sows with mild sores, preventive treatment should be initiated. Sows with severe sores should be kept in a hospital pen and treated.

Page 11

Points 9.8, 9.9 and 9.10 have been combined into a new point 9.8:

9.8 Used vehicles must always comply with the quarantine period, as stated in both tjekvogn.dk and on the vehicle's latest valid washing certificate, regardless of the reason for the quarantine period. Indicative quarantine periods and an overview of the risk areas are available at dts.svineproduktion.dk. The quarantine regulations comprise but are not limited to:

- a) a) A minimum 48-hour quarantine period must always be observed prior to a transfer between Danish herds where the animals are unloaded. However, transfer from a Danish herd to a collection centre, slaughterhouse (with the exception of Danish Crown) or directly abroad is permitted immediately after washing and disinfection if the vehicle's most recent valid washing certificate is green.
- b) b) After a valid biosecurity washing procedure has been carried out at a DANISH approved sanitising, cleaning and disinfection site, the quarantine period is reduced to 12 hours prior to transport abroad. However, the quarantine period remains at 48 hours for the transport of animals between Danish herds and from Danish herds to a collection centre or slaughterhouse. Biosecurity washing procedures are only offered to vehicles that transmit GPS data to SEGES' web server.

Point 9.11 has been changed to a new 9.9:

9.9 Producers must ensure that all transport of live pigs from DANISH approved herds between Danish herds for slaughtering in Denmark or for export to Germany is undertaken by QS certified hauliers*. Hauliers that only transport animals for slaughter to Danish Crown or Tican Fresh Meat are QS certified through their respective contracts.

A haulier's QS certification is visible on the washing certificate. The website dts.svineproduktion.dk contains a list of DANISH approved hauliers.

*To be certified under the German quality assurance scheme, QS, please contact Baltic Control at the following address cert@balticcontrol.com tel: + 45 86 21 62 11. A list of QS co-ordinators is available at the website q-s.de
