Attachment 5: Addendum – Add-on

An addendum (add-on) to the DANISH Product Standard can be created.

The requirements for the add-on scheme are that no requirements in the DANISH Product Standard can be deviated from or waived.

Requirements in the DANISH Product Standard can be scaled up or sanctioned more strictly under the terms of add-on schemes – but not reduced or mitigated.

The requirements for add-ons are that a full DANISH Product Standard serves as the foundation, and a DANISH Product Standard accredited certification body conducts an annual audit of the entire DANISH Product Standard, including the additional requirements specific to the approved add-on schemes.

Moreover, the DANISH approved producer must have a separate agreement with the company(s) requiring add-ons in order to be approved to have their herd certified under supplementary schemes.

The validity of the certification is determined by the scheme owner of the add-on concept for the DANISH Product Standard.

Applications for certification for add-on schemes to the DANISH Product Standard should be made directly to the accredited certification body.

Details regarding the requirements and sanctions related to add-on schemes can be obtained by contacting the scheme owner of the concept.
